## Active Drainage Ventilation System

Studor P.A.P.A. (Positive Air Pressure Attenuator) and Studor Air Admittance Valves (AAVs) provide a complete Active Drainage Ventilation solution, which is particularly suited to high – rise applications.

An active ventilated system provides relief at the Point Of Need (PON) by removing or attenuating an incoming pressure transient that, if left, could lead to trap depletion.

The combination of the P.A.P.A., Maxi – Vent and Mini – Vent AAVs support a complete system to limit pressure fluctuations, guaranteeing the integrity of the traps.
